CC3100 IP Configuration Application

Overview

Return to CC31xx & CC32xx Home Page

This sample application demonstrates how to configure a static IP address for CC3100. The device connects to the AP w/ the configured static IP. The IP address will be stored in the non-volatile memory.

Note: This wiki page is only applicable for **CC3100-SDK v1.0.0** and upward releases. For documentation on older SDKs' examples, refer corresponding file in **<cc3100-sdk-installation-location>\cc3100-sdk\docs\examples**

Source Files briefly explained

i. main - Initializes the device, configures CC3100 for static IP and connects to AP.

Application details and Usage

- Connect the board to a Windows-PC and configure the terminal-program for seeing the logs - CC3100 & CC3200 Terminal Setting has detailed instructions for configuring the terminal-program
- Edit values for below macros in **main.c** for configuring the static IP address:

```
#define CONFIG_IP           SL_IPV4_VAL(192,168,1,45)
```

- Edit values for below macros in **main.c** per the APs properties:

```
#define AP_MASK             SL_IPV4_VAL(255,255,255,0)
#define AP_GATEWAY          SL_IPV4_VAL(192,168,1,1)
#define AP_DNS              SL_IPV4_VAL(0,0,0,0)
```

- Edit following parameters in **sl_common.h** - The device connects to this AP on getting the corresponding command from application:

```
#define SSID_NAME           "<ap_name>"
#define SEC_TYPE            SL_SEC_TYPE_OPEN
#define PASSKEY             ""
```

- Build and run the application
- See the self explanatory logs on the terminal-program's console.
    - The device connect to the '<ap_name>' access-point w/ the static IP defined in 'CONFIG_IP'.
    - The connection could be checked by pinging CC3100 on the static IP address

Note: : User needs to reconfigure the device in 'DHCP Mode' for executing other sample applications. Refer function **configureSimpleLinkToDefaultState** in this example's **main.c** for configuring the device in 'DHCP Mode'. Also, defining **USE_DHCP** in this sample application configures the device in DHCP mode

Limitations/Known Issues

None
